Instructions for using the personnel system:

1. When the program starts running - the employee will have to identify – as an employee or the personnel manager.
2. Once the employee chooses the right role - he will have to login to his account – with the given password from the HR.
3. Once the connection completed - he will be presented with a menu, containing his options for actions + an exit option.
4. Each choice will follow-up with instructions according to the action.

The system is operating to save the employees' details, handle the branches & schedules, and make the shifts assignments & employees' constraints an easier task.

The HR (personnel manager) adds the employees & chooses their password.

We have loaded couple of employees & the manager information for an example.

The loaded data is:

Employees:

1. Ron Hadad, id – 111111111, password – 111111
2. Guy Cohen, id – 222222222, password – 222222
3. Tal Levi, id – 333333333, password – 333333
4. Ron Zehavi, id – 444444444, password – 444444

Manager:

Omer Guz, id – 555555555, password - 123456
